

CLAP

FORM N° 3

Version : 5

Directive 97/23/EC

Keywords:

Standard

Directive reference:

Adopted by CLAP:

27/01/2005

Subject:

New approach – Publication EN standards relative to design/manufacturing standards (vessels, piping or boilers)

Question:

Which format has to be respected shall be applied for the publication of the standards relative to design/manufacturing standards (series EN 13445 for vessels, series EN 13480 for piping, series EN 12952 and EN 12953 for boilers) and their amendments?

Answer:

Particular provisions were adopted by the Technical Board of CEN (Doc. BT N 5103) for these 3 series of standards because of their complexity and their volume: they concern firstly the rules of for structure and drafting (numbering of tables and figures, number of version) and secondly the publication of the 3 linguistic versions (layout page on same page content).

These provisions were adopted applied for the publication of the first editions of the standards (2002). They also apply to the amendments. See also CLAP 4.

Modifications with regard to the previous adopted version: Indication of the format used in the standards already published.
